Distinction Task 6.3: Custom Program Pitch

Focus

Make the most of this task by focusing on the following:

- Concept:

Focus on demonstrating a sophisticated application of course concepts using well-thought-out UML sketches of the user interface and showcasing how the program leverages the skills and knowledge acquired during the course to build software solutions.

Overview

The main requirement for a Distinction Grade is the ability to show that you can use what you have learned to design and implement a program of your own creation.

For this task, you will write a short pitch for your program so that we can help make sure that it will be sufficient for the distinction or high distinction grade.

Submission Details

Submit the following files to OnTrack.

- A short report with the details of the program you want to create.

Instructions

Write up a short description of the program you want to create. Include things like sketches of the user interface, along with some ideas you have for the classes you will need to add. This can be written in a casual tone, for the teaching team. We can then review it and make sure you are on track.

There is no need for the document to be overly long, one, at most two pages.
