

SIT773 Software Requirements and Analysis

Pass Task 1.4: Identify actors and stakeholders

Overview

As described this week, a stakeholder is anyone who could be affected by a system or has input to provide in the implementation of a system. Stakeholders may be directly or indirectly affected by the system.

In this task, you will identify the varying stakeholders of the Deakin Library system and prepare a report to summarise your findings.

Submission Details

Submit the following files to OnTrack: - A brief report describing the varying stakeholders of the Deakin Library system.

Instructions

1. Visit the Deakin University online library web site and navigate through the varying pages that the web site consists of.
2. Review the step related to problem statements, where stakeholders are described, in order to assist with identifying the stakeholders of the Deakin Library system; specifically, refer to the following questions:
 - Who is interacting with the system?
 - Who is the customer for the system?
 - Who will be affected by the system's outputs?
 - Who will maintain and operate the system?
 - Who is responsible for evaluating and approving the system?
3. Compile a report that describes the stakeholders of the Deakin Library system.
4. Submit your work to OnTrack.
