you can declare the specific type when you assign the variable, for instance:

```
System.Drawing.Image img=new System.Drawing.Image();
```

then the program can identify which image class you want to use;

What is string[] args for?

YUPENG WEN 17 July, 2024 9:30 AM

supplement:

public static void Main (){} : this represents a normal static method

public static void Main(string[] args){} : this represents a special static method which compiler will identify as the entry of the class.

an example for drawing the board
