

3.2P: Create a web page with external styles and fonts

In the task you are asked to modify your `task3-1.html` project. In this task you will be moving the CSS style rules into an external (separate) file and also using some external fonts.

The external CSS rules are more portable and the rules can be applied consistently across multiple html files. We will also be extending/changing the CSS rules to change the presentation of the web page to appear like this shown below:

Task3.2 Extenal CSS

These updates have updated the Fonts used and also margin spacing for the footer. The selectors and changes to be applied are shown in the list below:

- `html` selector:
 - font family is `Mate, Georgia, Garamond, 'Times New Roman', serif`
- `nav`
 - margin `1.5em`
 - font-family is `'Cinzel', Georgia, Garamond, 'Times New Roman', serif`
 - font-weight is `900`
- `footer`
 - font size is `0.8em`
- `h1, h2, h3` selectors:
 - font family is `'Merriweather', Verdana, Tahoma, sans-serif`
 - font style is `italic`
- `h1`
 - letter-spacing is `0.2em`

Steps:

1. Start by copying your `task3-1.html` file to a new `task3-2.html` file.
2. Next move all the *internal* CSS style rules into a new, external `style3-2.css` file. Then link this from your web document using the appropriate `<link rel="stylesheet" href="style3-2.css">` command in the `<head>` section of your document. **Your webpage should look exactly like your *Task3-1*.**
3. In the next step, you need to link the source of the fonts which will be used. Here, we are using some *Google Fonts*. Add into the `<head>` section of your document:

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link href="https://fonts.googleapis.com/css2?family=Cinzel:wght@400..900&family=Mate:ital@0;1&family=Merriweather:ital,wght@0,300;0,400;0,700;0,900;1,300;1,400;1,700;1,900&display=swap" rel="stylesheet">
```

4. Then extend the font-family for the various selectors (as shown in the table above) to use `'Righteous', 'Orbitron' and 'Philosopher'`, for the `html` fonts, `h1` `h2` `h3` and `nav` sections respectively.
5. Finally, we need to fix the margin spacing in the `footer` section. Here we want to apply a margin spacing of `0.1em` to all `p` selectors in the `footer`. This is achieved with a rule:

```
footer p {  
    ...  
}
```

What will you submit?

You should submit:

- One screen-shot of your final web page showing the application of the updated fonts and use of external styles.
- Your updated `task3-2.html` file showing the linking to the external style rules and fonts.
- Your new `style3-2.css` file.
